DETAILED ACTION

1. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

- 2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
- 3. Claims 1-3 and 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, lines 3 and 4, the phrase "adapted to" has no clear technical meaning. Further, the use of this phrase does not particularly point out the invention since applicant has not claimed how the conventional elements are modified in accordance with the invention.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3 and 5-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Morris.

Morris discloses a classifier and a method for segregating particles by size or density. The classifier and method comprise a fluidization chamber 6 adapted to contain a fluidized bead; a

fluidization means 8 adaped to provide a flow of fluidization fluid into the chamber; and one or more array of inclined plates 17-21 and/or 25-27 mounted within the chamber positioned such that particles elutriated by the fluidization fluid within the chamber are caused to be segregated above or below the plates according to their size or density. The plates comprise a plurality of an array of parallel equally spaced plates extending across the chamber. Re claim 7, a feed fluid is
